

November's challenge is to turn a genie bottle, not to be confused with a lamp. But if you can figure out how to turn one, be my guest. Your genie bottle can be simple or complex, large or small, segmented or plain, but don't forget the stopper.

Not all videos demonstrate the safest turning practices, particularly turning off the lathe before adjusting the tool rest. Please use common sense when following the directions provided in some of these videos.

Instructional Videos:
